

Diabetic Shoes

Care and Use Instructions

1. Visually inspect your feet every day for blisters, cuts and scratches. Especially initially when shoes need ``broken in". Every couple hours is recommended in the "break-in" period.
2. Always be sure that the insides are clean, dry and free from foreign objects.
3. It is recommended to wear socks in the shoes, as compared to nylons. Socks absorb perspiration and act as a barrier to reduce friction.
4. The laces should be pulled snug to insure that the foot and shoe are moving in unison.
5. The outside of the shoe should be maintained like any other shoe. polish, saddle, mild soap and water work fine.
6. After you have had the shoes for several months , check to see if they are wearing evenly. Sometimes uneven wear means that there could be a problem. If this exists, call your physician or MOPC at 1(800) 598-6672 and ask for their opinion.
