

Humeral fracture Brace

Care and Use Instructions

1. This brace is designed to support your fractured Humerus bone.
2. The brace basically squeezes your bone side to side to support the bone. The rest of the brace wraps around it and creates a hydraulic pressure in your arm by squeezing the fluids, this also supports the bone.
3. The brace is designed to be worn snug. As tight as possible but not to make the hand "numb" or "blue"
4. The brace is designed to allow you to use your elbow and shoulder. Even if you don't use them you should move them from time to time. If you need help to support your arm while you move the shoulder and elbow do not hesitate to ask someone. Keeping your shoulder and elbow from becoming stiff is important
5. The brace is not intended to be removed for several weeks.

If you are having problems or have questions, please do not hesitate to call your orthotist at Morgantown Orthotic and Prosthetic Center @ 800 598 6672.
